

About WiseFish

Wisefish is an ERP software designed and developed solely for primary and value-added seafood processors, distributors, traders and fishing operations.

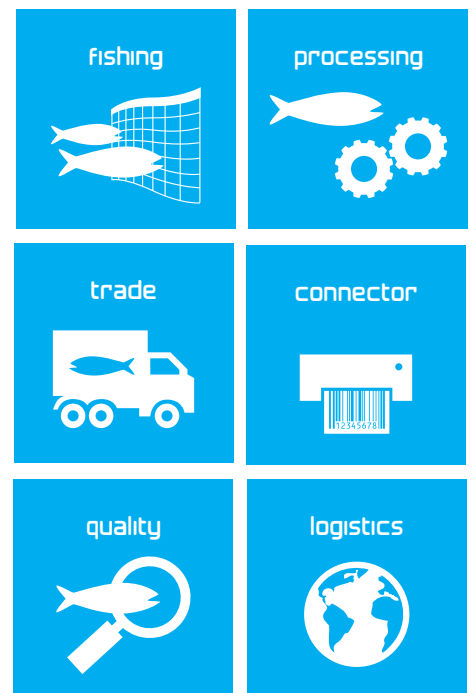

Subscription plan

The WiseFish subscription plan is designed with flexibility and customization in mind. Monthly fees for software updates and service access.

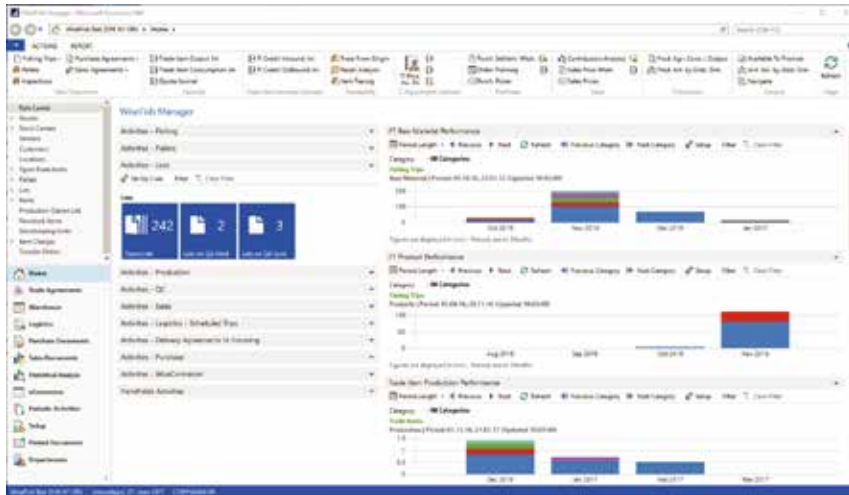

Integrated to Dynamics NAV

WiseFish supplements the standard functionality of Dynamics NAV by ensuring that inventory can be created as GS1 traceable units. All stock values are handled within standard NAV in the Inventory and G/L value tables.

WiseFish covers the whole seafood value chain.

WiseFish is developed on top of the standard ERP solution, Dynamic NAV, with full integration.

All WiseFish stock quantities are stored in WiseFish tables that are connected to the Dynamics NAV inventory.

Great inventory handling and tracking

Multiple ways of entering stock into WiseFish, such as through Fishing Trips or through connected external production systems like Wise Peripherals, Innova from Marel, Trackwell, or Fishmarkets. They all utilize the WiseFish Trade Item front end to the NAV inventory system.

The same concept is used for purchases, production and sales. WiseFish Agreements are developed as a front end for standard NAV functionality. Receipt Agreements allow the user to record all necessary tracking information for purchases of food items and Production Agreements enable recording of necessary information for dissection production.

Microsoft Dynamics NAV is a business solution which uniquely brings together business applications, data, documents, and devices, with your people at the center, helping them make the most of their time.

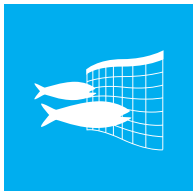

From server to cloud — desktop to mobile — get one familiar user experience to automate your business, help increase sales, enhance collaboration, and amaze your customers.

Easy upgrades

With unique design, WiseFish has a low impact on the standard NAV functionality allowing for easy upgrades whenever a new version of Microsoft Dynamics NAV is introduced.

Why WiseFish?

WiseFish is a fully integrated Dynamics NAV extension, which ensures that fishing operations, dissection production and product sales are handled in a completely traceable manner. With Sales Agreements, full control of customer relations for repeat business can be maintained.

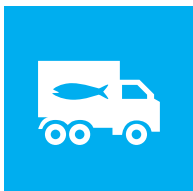

Fishing

In WiseFish the user can record all necessary information about fishing trip catch and fishing quotas.

The system handles both ice-fishing and freezer trawler production. All information about crew, costs and payroll can be recorded and sent onwards to payroll systems. Whether the user is handling his own vessels or 3rd party vessels, the catch can be recorded and sold or purchased as necessary.

Revenue information between the fishing operations and plant production is maintained for companies that are running both and selling the catch from the operations to the factory.

Trade

Trade Items are inherently a WiseFish traceable physical inventory.

While Dynamics NAV offers mainly logical inventory, WiseFish maintains all stock as Trade Items in addition to posting standard NAV inventory entries. A Trade Item within WiseFish can be created either as a barcoded individual or a bulk Trade Item that can be split down into smaller bulks or individual Trade Items.

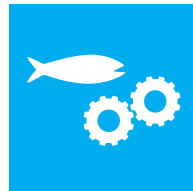

Trade Items can be palletized and handled together as SSCC-barcoded Pallets.

Quality

Enforce your HAACP plan by setting up quality monitoring tools that automatically display a corrective action when a

monitored condition falls out of range. Quality inspections can be linked to various information, like fishing trips, lots, pallets etc. Inspection reports can be printed for the selected information, e.g. all reports for pallets in a selected sales document.

Processing

WiseFish has a detailed production system where full traceability is maintained from raw materials to end products. Raw materials are fed

into production lots and in some cases to Production Agreements.

WIP-items or final products are created as output to those same lots. When using WIP-items, Lot Stages can be maintained to track yield between production stages.

Connector

Wise Connector is a data capture system, fully integrated with WiseFish. Various information, like receiving and consumption of raw

materials, WIP-items; production of WIP-items and final products; and sales information can be recorded or captured and fed directly into WiseFish.

Trade Item cartons can be filled with produced bags or boxes and labelled with weight and serial number information to give WiseFish complete trace-information about all stock.

Logistics

Logistics is a loading and dispatching module for large scale shipping which allows for managing and scheduling of

transport and delivery of trade items in WiseFish. In brief: A sales person creates a delivery agreement to be shipped to the corresponding customer according to the shipment terms for a specific shipment date to a designated place of delivery A.

A logistics manager reviews all released delivery agreements for a specific shipment date and assigns appropriate scheduled trips to them, which fits the delivery plan and schedule.

WiseFish in the Cloud

- The WiseFish subscription plan

Designed with flexibility and customization in mind, WiseFish is the ideal solution for seafood companies that want their ERP system to conform to their conditions and terms. When you choose the WiseFish subscription plan, you get to choose whether to install the software on-site or have it hosted.

It provides customers with the fluidity that comes with adjusting the number of users per month, and thus keeping cost down.

The WiseFish subscription plan is set up with monthly fees for software, updates and service access.

Key benefits of subscription

- Enterprise-grade security, availability and elasticity.
- Flexibility.
- Expenses are known.
- No capital intensive up-front costs for software licenses.
- Option to have a variable number of users each month.
- Minimal installation and deployment costs.

Available WiseFish subscription modules

WiseFish Software:

- Fishing
- Processing
- Trade and distribution
- Export
- Logistics
- Peripherals and Connector
- Aquaculture
- Quality

Other Wise solutions:

- Financial accounting
- Accounts receivable/payable
- Purchasing and stock
- Sales and marketing system
- Property management
- WisePlus
- WiseJob
- Wise Analyzer

With WiseFish subscription, your ERP system covers the whole seafood value chain from fishing through production and sales and distribution.
