

# WiseFish installation

## The inside story at Omicron Seafood

WiseFish seafood software was installed and launched remotely at Omicron, Suriname, from the Icelandic head offices. WiseFish staff used remote access, working around the time difference between the two countries, to set up the system. All went well and without any travelling of WiseFish or Omicron staff. Assistance and coaching is also done via the web.

### Catch becomes Omicron Inventory

Captures from fishing trips are entered into WisePeripherals and the information is registered in WiseFish. After viewing the fishing trip, a landed fishing trip is created and posted.

The handling and production is recorded with WisePeripherals in the line production. The data is then transferred to WiseFish where it is posted and Product Inventory is created.

### WiseFish Peripherals at all stages

For Omicron, tracking the production is an important factor in the production line. Wise Peripherals is placed in strategic positions, connecting to scales and production system on the shop floor, feeding live data to the WiseFish system.

The system can produce towards sales contracts or towards inventory and keeps track of fulfillment of contracts.

### Labels

Throughout the production, the bin labels, box labels and pallet labels are created at weighing stations and printed out simultaneously.

### Traceable Trade Items

Each Trade Item is traceable. With handheld devices it is possible to track the bins, boxes etc.

Is WiseFish something you could use in your business?

WiseFish first remote software installation has been completed with great success.

## Dynamics 365

The Trade Items in WiseFish are natural extensions of the standard inventory system. The system offers full traceability, from raw materials to final products if the WiseFish user records all the necessary information.

### Sales and Analytics

Purchasing, usage, production and sales automatically accrue to Dynamics 365 Business Central in the financial perspective, and the system is therefore always up to date.

Omicron uses WiseAnalyzer to analyze data, in addition to various reports and analyzes in Business Central and WiseFish.

### Modern application

Omicron makes great use of the system utilizing different clients, such as for web and tablets.

## About Omicron

Omicron was established in 1995 and caters to the growing market demand for fresh fish products. Head offices are in Paramaribo.

Among the many products available from Omicron are: Kingfish, Spanish Mackerel and Silver Corvina steaks. Other products include whole, gutted, fillets, fresh and frozen from a variety of other West Atlantic species of fish.

### Mr. Pretaap Radhakishun Omicron Seafood CEO:

"The WiseFish installation went smoothly. All systems including WisePeripherals were installed remotely from Iceland using Teamviewer, resulting in minimal costs.

The set up was successful, even without sending crews across countries. The time difference really didn't seem to stand in the way of the data processing and the good cooperation".

N.V. Omicron Seafood is a Surinamese corporation established in 1995.

They started out as a small company and are now one of the largest processors and exporters of frozen and fresh fish in Suriname.

Their commitment to Food Safety, Food Quality and Continuity has made them a successful and fast growing company with a number of satisfied customers in different parts of the world.
